Maize Production Watch

At the end of March, France's 2020 maize production programme was estimated up 16 percent compared to the previous year. The increase is also expected in the main EU countries competing on the maize market, as well as in the non-EU member countries, where the trend is clearly upwards. See the detailed estimates.

Coronavirus Pandemic Drives Maize Prices down

A significant share of the U.S. maize production goes to the ethanol industry. However, ethanol prices are closely linked to petrol prices, which are currently plummeting. The sharp decline of fuel demand brought about by the Covid-19 has therefore resulted in a fall of maize prices. An analysis of this delicate situation.

Maize: Short Cycle, but Huge Potential

Agriculture owes half of its progress to practices developed by the farmers themselves, but also to their variety choices. The crop's huge potential, as enabled by the genetic progress, originates in the specific characteristics of maize, a plant with a particularly efficient biochemical system.
